General information / Información general

Recommended information

All products receive a protective coating to prevent possible attacks during their placement in the implementation process at work. This protection should be completely removed resulting in clean material. Please consult our commercial network if you have any questions regarding recommended cleaning for our products.

Información recomendada

Todos los productos llevan una aplicación protectora para evitar posibles agresiones durante su colocación en el proceso de ejecución de la obra. Esta aplicación debe eliminarse completamente para conseguir una limpieza óptima del material. Consulte con nuestra red comercial cualquier duda acerca de las recomendaciones de limpieza de nuestro producto.

Information reommandée

Tour nos produits viennent avec une pellicule protectrice pour éviter les éventuelles agressions lors de la pose du matériel sur chantier. Cette protection doit être complètement éliminée pour obtenir un nettoyage optimum des carreaux. Veuillez consulter auprès de notre réseau commercial prou toute demande sur les recommandation de nettoyage de nos produits.

Empfohlene information

Alle Produkte sind mit einer Schutzschicht versehen um mögliche Angriffe während der Verlegung und Verarbeitung zu vermeiden. Diese Schutzschicht muss vollständig entfernt werden um eine optimale Reinigung des Materials zu erzielen. Bei Fragen zur Reinigungsempfehlung unserer Produkte wenden sie sich bitte an unser Händlernetz.

Cleaning & maintenance

Eng

The first cleaning "after installation".

The most important cleaning operation is performed immediately after laying the tiles. This involves the complete removal of residues and dirt from the tile placement. An inadequate or late removal of this waste can create a cementitious layer on the tile capable of absorbing all forms of dirt. This may give the impression that the tile gets dirty when the actual problem resides in the surface film of dirt which was not removed immediately after laying.

Once the grouting of the tiles is finished, it is important, while the grout is still wet, to carefully remove any excess material immediately. This can be done using a sponge and plenty of clean water, repeating this as many times as necessary. Do not perform the cleaning with metal tools, scrapers or abrasive pads. For stubborn stains, clean with alcohol and lukewarm water and rub with a clean cloth. If they do not disappear, check with the relevant technical department. Once the above mentioned washing is done, another washing should be carried out using basic or alkaline degreasing agents, as acid washing can leave stickiness on the pavement which could help retain dirt. In areas where water is calcareous, it is convenient to dry the surface, in order to prevent the deposition of carbonates which will reduce the surfaces' gleam.

Regular maintenance

Many available cleaning products for general use can be used with our products. For daily cleaning, one can use detergents or degreasing products diluted in warm water, following each product's instructions. It is important that the cleaner does not have oil, animal fat, or soap base. These components may leave an invisible residue whilst absorbing dirt (lime stratifications detergent or residues). It is also important that the tile receives a thorough rinsing with clean water after the cleaning process is complete. The low water absorption and high standards met by all porcelain tiles ensure a product which is easy to maintain. Our products do not require the use of sealants or waxes. These superficial coatings can really affect the performance of the tile in a negative manner.

It is important to note that hydrofluoric acid (HF) and derivatives can irreparably damage the tile.

The general steps for regular cleaning of our ceramic products can be summarized as follows:

- Remove any solid or liquid waste from the tile, sweeping with a soft bristle broom or vacuuming.

- Clean up liquid spills as soon as possible with lukewarm water.

- Apply the recommended amount and dilution of the cleaner for the tile (follow the cleaner manufacturer's instructions). The wiper must remain in the tile a minimum period of 5 minutes.

- For unpolished tiles, scrub with a nylon sponge or soft bristle brush. A floor machine equipped with a nylon pad or bristle brush can be used for heavily soiled surfaces. For polished tiles, clean with a nonabrasive cloth.

- Remove the dirty cleaning solution and water with a vacuum cleaner or cloth. Rinse the porcelain tile with clean water and remove again with a vacuum cleaner, mop or towel. It is absolutely essential that all detergent residues are removed completely from the tile. Any remaining detergent that dries on the tiles surface can form a coating that can trap dirt and be very difficult to remove. The tile should be rinsed several times to remove all detergent residues.

During use, the cleaning of the tiles should be similar to window cleaning. Ammonia and even bleach type products can be employed, but both must be diluted in water.

In case of special stains and/or particularly resistant, it is advisable to use specific detergents according to the cleaners' manufacturer. Do not forget that removing any type of stain is easier when it is still fresh. It is important to always do a pre-test the detergent products result on a small sample of the porcelain.

Limpieza y mantenimiento

Esp

La primera limpieza "después de la colocación"

La operación de limpieza más importante se lleva a cabo inmediatamente "después de la colocación de la baldosa". Esto implica la eliminación completa de los residuos de lechada y de la suciedad de la colocación de las propias baldosas. Una eliminación inadecuada o tardía de estos residuos puede crear sobre la baldosa una película cementosa capaz de absorber toda forma de suciedad, dando la impresión que se ensucia la baldosa, cuando el problema está en la película superficial de suciedad. Una vez efectuado el rejuntado de las baldosas, es importante cuando el material de rejuntado todavía está fresco, eliminar el material sobrante cuidadosa e inmediatamente, utilizando para ello una esponja y agua limpia abundante, repitiendo esta operación tantas veces como sea necesario. No debe realizarse la limpieza del material con espátulas metálicas ni estropajos abrasivos. En el caso de manchas resistentes, limpiar con alcohol y agua caliente y frotar con un paño limpio. Si no desaparecen, consultar con el departamento técnico correspondiente. Una vez efectuado el lavado mencionado arriba, deberá efectuarse un lavado básico o alcalino utilizando detergentes desengrasantes, ya que el lavado ácido puede dejar una untuosidad sobre el pavimento que podría contribuir a retener la suciedad. En aquellas zonas donde el agua sea calcárea conviene secar la superficie para evitar la deposición de carbonatos que disminuyen el brillo superficial.

Mantenimiento regular

Muchos productos de limpieza de uso general que están disponibles son aceptables para el uso en nuestros productos. Se puede emplear para la limpieza diaria detergentes o desengrasantes diluidos en agua caliente, según indicaciones del envase del limpiador. Es importante que el limpiador no tenga base de aceite, grasa animal, o jabón. Estos componentes pueden dejar un residuo invisible al atrapar la suciedad (estratificaciones de cal de detergente o residuos de suciedad). También es importante que la baldosa reciba un enjuague a fondo con agua limpia después que el proceso de limpieza se haya completado. La densidad inherente y baja absorción de agua de todos los productos aseguran un producto que es fácil de mantener. No requieren el uso de selladores o ceras. Estos recubrimientos superficiales pueden realmente afectar negativamente el rendimiento de la baldosa.

Es muy importante tener en cuenta que el ácido Fluorhídrico (HF) y derivados pueden dañar irremediablemente la baldosa.

Los pasos generales de limpieza regular para nuestros productos cerámicos se pueden resumir del siguiente modo:

- Retirar cualquier residuo sólido o líquido de la baldosa, barriendo con una escoba de cerdas suaves o pasar la aspiradora.

- Limpiar los derrames líquidos tan pronto como sea posible.

- Aplicar la cantidad y dilución del limpiador recomendadas para la baldosa (ver indicaciones del fabricante del limpiador). El limpiador deberá permanecer en la baldosa un periodo mínimo de tiempo de 5 minutos.

- Para baldosas sin pulir, frotar con una esponja de nylon o un cepillo de cerdas suaves. Para superficies muy sucias puede usarse una máquina de piso equipado con una almohadilla de nylon o con un cepillo de cerdas. Para baldosas pulidas, limpie con un trapo no abrasivo o un paño.

- Retirar la solución de limpieza sucia y el agua con una aspiradora o un trapo. Enjuague la pieza con agua limpia y retire de nuevo con una aspiradora, fregona, o una toalla. Es absolutamente esencial para todos los residuos de detergente que se eliminan por completo de la baldosa. Cualquier resto de detergente que se seque sobre la baldosa puede formar un recubrimiento que puede atrapar la suciedad y será muy difícil de eliminar. La baldosa debe enjuagarse varias veces para eliminar todos los residuos de detergente.

Durante su uso, la limpieza de la baldosa debe hacerse de forma similar a la limpieza de cristales. Se puede emplear productos de tipo amoniacal e incluso lejía, ambos diluidos en agua. En caso de manchas particulares y/o especialmente resistentes, es aconsejable usar detergentes específicos según especificaciones del fabricante del limpiador. No hay que olvidar que la eliminación de cualquier tipo de mancha resulta más fácil cuando ésta todavía está fresca. Es importante hacer siempre una prueba previa antes de usar los productos detergentes.

Time...

Time is very slow for those who wait, very fast for those who are scared, very long for those who lament, very short for those who celebrate, but for those who love, time is eternal.

A.mano

El tiempo es muy lento para los que esperan, muy rápido para los que temen, muy largo para los que sufren, muy corto para los que gozan; pero para quienes aman, el tiempo es eternidad.

William
Shakespeare

Crafts...

Architects, painters, sculptors. We must all return to crafts! For there is no such thing as "professional art". There is no essential difference between the artist and the craftsman. The artist is an exalted craftsman.

¡Arquitectos, escultores, pintores, todos debemos volver a la artesanía! Pues no existe un arte como profesión. No existe ninguna diferencia esencial entre el artista y el artesano. El artista es un perfeccionamiento del artesano."

Simple...

Architects have made
architecture too complex.
We need to simplify it and use a
language that everyone can
understand.

Los arquitectos hemos hecho la
arquitectura demasiado compleja.
Tenemos que simplificar y utilizar un
lenguaje que todo el mundo pueda entender.

Symbol...

There is a powerful need for symbolism,
and that means the architecture must have
something that appeals to the human heart.

Hay una necesidad muy poderosa
por el simbolismo, y eso significa
que la arquitectura debe tener algo
que atraiga al corazón humano

Mold...

You can mold, you can press it into.
After all, you haven't any straight lines in your body. Why should we have straight lines in our architecture? You'd be surprised when you go into a room that has no straight line, how marvelous it is that you can feel the walls talking back to you, as it were.

Se puede moldear, apretar .

Después de todo, no tiene ninguna línea recta en su cuerpo. ¿Por qué debemos tener líneas rectas en nuestra arquitectura? Se sorprendería al entrar en una habitación que no tiene línea recta, lo maravilloso que es el sentir como las paredes te devuelven la palabra , por así decirlo.

Philip Johnson

Mayo 2016
AMA01/0616

The background is a complex, abstract composition of various textures and colors. It features large, irregular patches of light gray and off-white, interspersed with darker, more saturated gray and black areas. The textures appear to be layered, with some areas showing a fine, grainy surface and others showing more pronounced, almost crystalline or fibrous structures. There are also some darker, more solid-looking areas that might be interpreted as shadows or deep layers of paint. The overall effect is one of depth and complexity, suggesting a process of building up or peeling away layers of material.

Although its composition displays a geometric pattern, it could be some misalignments since this tile is a reproduction of a handmade encaustic. The use of wide joints may aggravate the pattern continuity.
Aunque la composición forme un patrón geométrico, las líneas pueden no coincidir perfectamente al ser una reproducción de un producto artesanal. El uso de juntas grandes podría afectar negativamente a la continuidad del dibujo.
